

How to use Git & Github

- Install Git in your local computer
 - Download from official link: <https://git-scm.com/>
 - Check git version:

```
</> Bash
git --version
```

- Create a GitHub Account
 - Official link: <https://github.com/>
- Configure Git (First Time Setup) (They only set your **identity for commits.**)
 - Set your name and email. This information will appear in your commits.
Using these command line:

```
</> Bash
git config --global user.name "Your Name"
git config --global user.email "your@email.com"
```

[More detail of git configuration.](#)

- Choose Authentication Method to connect Git to Github

To connect Git to GitHub, you need one of these: **HTTPS or SSH.**

HTTPS (Simplest)

Clone/push using HTTPS: `git clone https://github.com/username/project.git`

Authentication uses:

- Username
- Personal Access Token (PAT) instead of password
- Need to create Personal Access Token: <https://github.com/settings/tokens>

SSH (Recommended for Developers)

1. Generate SSH key: `ssh-keygen -t ed25519 -C "your@email.com"`
2. Add the key to GitHub: <https://github.com/settings/keys>
3. Then clone project using: `git clone git@github.com:username/project.git`

5. Internet Connection

You need internet when you:

- git clone
- git push
- git pull

Local Git operations like commit work **offline**.
